Agenda I

- 1 Introduction
- 2 Reference management
 - Reference management software
 - Zotero
 - Zotero and TREESLab
- 3 Research data management
 - Zenodo
 - Zenodo and TREESLab
- 4 Final remarks
- 5 References

What do researchers do?

The research cycle

Source: OpenScience101.org [3].

Introduction

- The scientific endeavour is time-consuming.
- Scientific research includes, among other tasks, keep track of the current scientific literature and use to foster new discoveries.
- But also, ensuring the scientific reproducibility of their experiments.
- Some work related to these task could done using specialized software and tools.

Digital Object Identifier DOI

- Unique.
- Identifier.
- Persistent.
- Resolvable.
- Metadata.
- FAIR:
 - ▶ Findable.
 - ▶ Accessible.
 - ▶ Interoperable.
 - ▶ Reusable.

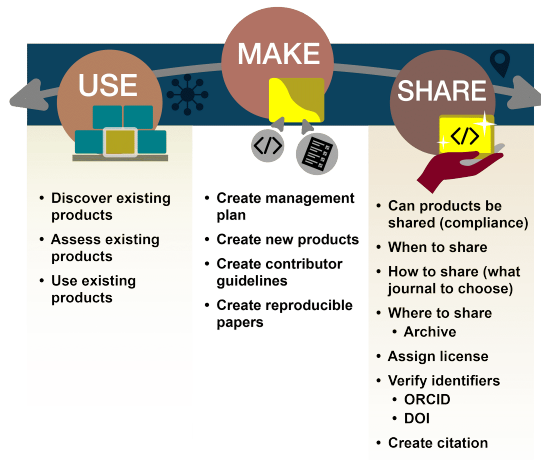

Reference management.

Reference management

What do researches do with bibliographic references? [6]

- Import them from databases.
- Organize them.
- Gather additional metadata.
- Highlight and add notes to them.
- Sharing them.
- Convert them between formats or styles.
- Insert them to documents using word processing software.

Source: OpenScience101.org [3].

Tools for reference management

- There are at least 15 pieces of software for reference management.
- Ron Gilmour made a comparison between CiteULike, RefWorks, Mendeley, and Zotero [6] in 2011.
- For a more up-to-date comparison, also check [software comparison article in Wikipedia](#).

Google is your friend. Source: [Wikipedia](#)

Zotero

- Free and open source reference management software (AGPL v3 license).
- Free cloud storage up to 300 MB.
- Released in 2006.
- Commonly used in medicine [2, 7].
- Integration with Word Processor Software (MS Word, LibreOffice Writer, OnlyOffice, and Google docs).
- Integration with Web Browsers (Firefox, Chrome, Safari, Edge).
- Download [here](#).

Import references to Zotero

Import references from other software:

- Mendeley.
- EndNote.
- Citavi.
- MS Word bibliography XML.
- Plain text.
- Bib(La)Tex.
- JabRef.
- Check how [here](#).

citavi

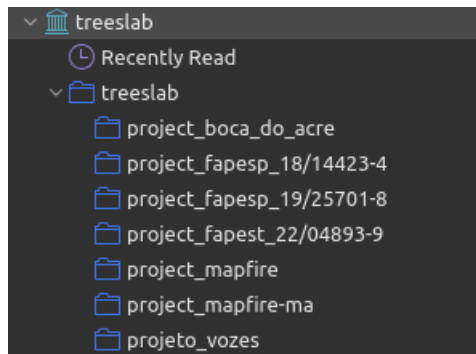

EndNote™

Organize references into collections

- References can be organized into collections.
- Collections allow hierarchical organization.
- The same item (reference) can belong to multiple collections.
- Use drag and drop to add items to collections.
- The TREESLab library has a collection for each project.

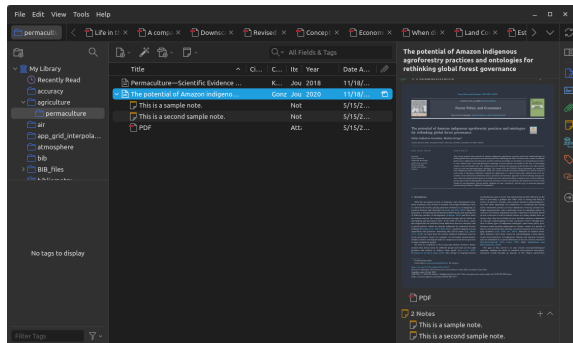

Gather additional metadata

- Zotero allows you to fill additional metadata for each item.
- You can even associate a PDF to an item (reference) in Zotero.

Highlight and add notes to references

- Zotero allows you to highlight and add notes to a PDF associated to an item (reference).
- You can also add notes to your highlights, to a (help [here](#)).

Share references

- Zotero allows you to create groups and use them to share references with colleagues.
- The TREESLab' publication list is a collection associated with the Zotero group called *treeslab*.

Description TREES laboratory is a research group co-led by Dr Luiz Aragão and Dr Liana Anderson. The group was created in 2009 when Dr Aragão moved from the Environmental Change Institute, University of Oxford to the School of Life and Environmental Sciences, University of Exeter in UK. Dr Aragão is now based at the National Institute for Space Research in Brazil, the current headquarters of TREES. Dr Liana Anderson is currently based at The National Center for Monitoring and Early Warning of Natural Disasters (CEMADEN), Brazil. The group's expertise is on assessing the risks and impacts of environmental changes on tropical ecosystems using remote sensing and field surveys. TREES members are trained in a multidisciplinary range of techniques and a multitude of instrumentation, technologies and approaches.

Group Library Anyone can view, only admins can edit

Convert references between formats or styles

- Zotero allows you to export items (references) or collections to several formats.
- It also allows to copy references and format them according to several reference styles.
- It is possible to add the ABTN style from [here](#).

Insert references into text documents

- [Google Docs](#) (using the Zotero connector for Web Browsers).
- [Libre Office](#).
- LaTeX (export collection to a BIB file).
- [MS Word](#).

L^AT_EX

Google Docs and Zotero

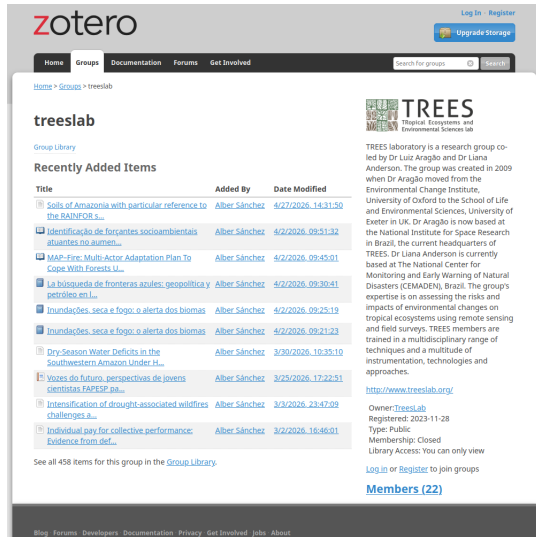

- Download the connector from [here](#).
- Grant Google access to your Zotero account.
- Choose a style for your references.
- The Zotero menu in the tool bar is activated.
- Make sure your Zotero desktop instance is running.
- Add references to your text.
- Add a bibliography section.

Faustian bargain. Source: [Wikipedia](#)

TREESLab group at Zotero

- TREESLab has a Zotero group (click [here](#)).
- This group hosts TREESLab's publication list.
- The group owner is TREESLab's email account wertreeslab@gmail.com
- Here we keep track of the publications produced by TREESLab.
- TREESLab members don't have to be members to add their publications to the list (but it'd be nice, though).

The screenshot shows the Zotero web interface for the 'treeslab' group. At the top, there's a navigation bar with 'Home', 'Groups', 'Documentation', 'Forums', and 'Get Involved'. The 'Groups' tab is active, showing a search bar and a list of groups. The 'treeslab' group is selected, displaying its 'Group Library' and 'Recently Added Items'. The 'Recently Added Items' section contains a table of publications. On the right, there's a profile for 'TREES' (Tropical Ecosystems and Environmental Sciences lab) with a description of the laboratory and its research focus. Below the profile, there's a link to the group's website and information about the owner, registration date, and membership status.

Researcher's profile at zotero.org

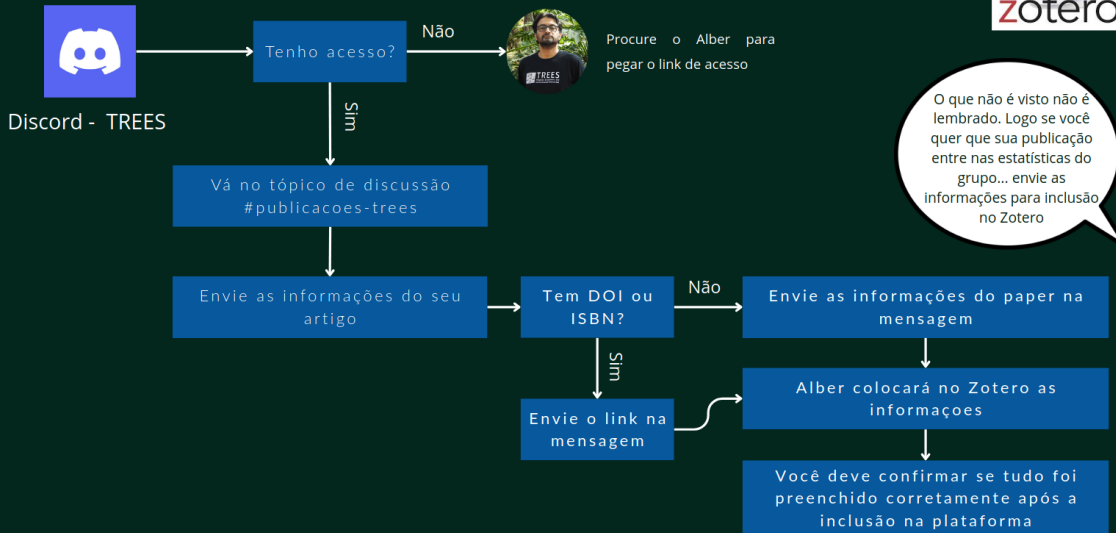

- Researchers can build a profile and zotero.org will host it.
- This profile would display the items in the *My Publications* collection (check [here](#)).

The screenshot shows the Zotero.org website interface. At the top, the Zotero logo is on the left, and links for 'Log In' and 'Register' are on the right. Below the logo is a navigation bar with 'Home', 'Groups', 'Documentation', 'Forums', and 'Get Involved'. A search bar is located below the navigation bar. The main content area displays the profile of Guilherme Mataveli. It includes a profile picture of a man with a beard and glasses, wearing a green t-shirt with 'TREES' on it. The profile lists his disciplines as 'Geography' and 'Environmental Studies and Forestry'. His affiliation is 'National Institute for Space Research (INPE)'. Under 'Groups', it lists 'gran01 (2)' and 'treelab (22)'. The 'Publications' section lists two items: 'Methods to Evaluate Land-Atmosphere Exchanges in Amazonia Based on Satellite Imagery and Ground Measurements' and 'Analysis of Precipitation and Evapotranspiration in Atlantic Rainforest Remnants in Southeastern Brazil from Remote Sensing Data'. Both items are by Gabriel De Oliveira & Nathaniel A. Brunsell & Elisabete C. Moraes & Yosio E. Shimabukuro & Guilherme A. V. Mataveli & Thiago V. Dos Santos & Celso Von Randow & Luiz E. O. C. Aragao, 2018 and 2016 respectively.

A researcher's profile. Source: zotero.org.

Publiquei meu artigo e quero colocar na biblioteca do TREES, o que fazer?

Questions

- *Dificuldade de personalizar referências*
 - ▶ Check slide 16.
- *Como vincular ao Google Docs*
 - ▶ Check slide 18.
- *Qual a vantagem do Zotero em relação ao Mendeley?*
 - ▶ Check slide 9.

Research data management.

What do researchers do with the data associated to their publications?

Zenodo

- Open repository launched in 2013 and run by [CERN](#).
- Let researchers upload files up to 50 GB.
- It assigns a DOI to uploaded datasets.
- It supports GitHub repositories.
- It was named after Zenodotus, the first librarian of the Library of Alexandria [1].

Why use Zenodo?

Data could be lost due to many reasons:

(a) Carelessness.

(b) Handling.

(c) Catastrophe.

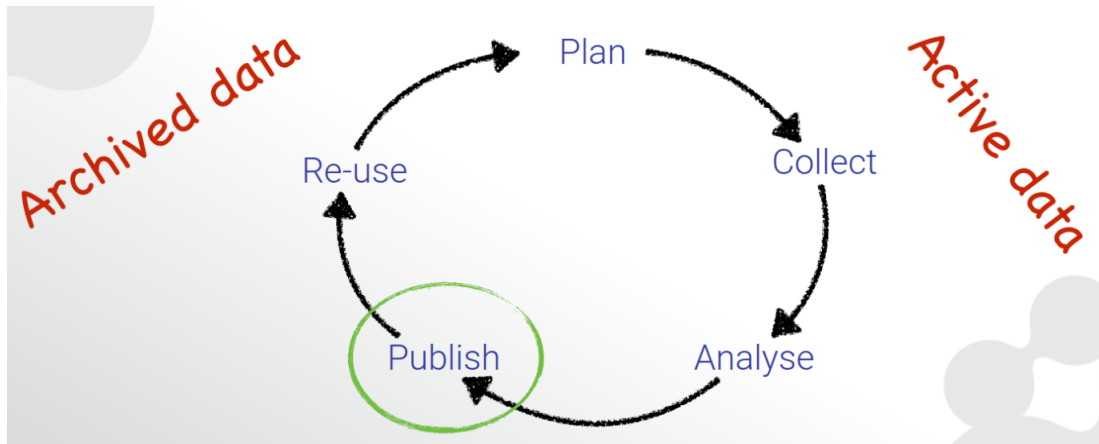

Examples of data loss [4].

Why use Zenodo?

- **Safe:** Data stored at CERN's data centre.
- **Trusted:** Operated by CERN.
- **No waiting time:** Available as soon as published.
- **Open or closed:** Restricted access mode.
- **Usage statistics.**
- **Versioning:** Update data and version numbers.
- **GitHub integration:** Preserve code.
- **Citeable:** Every upload has a DOI.
- **Data principles:** Findable, Accessible, Interoperable, Reusable.

Research data life cycle

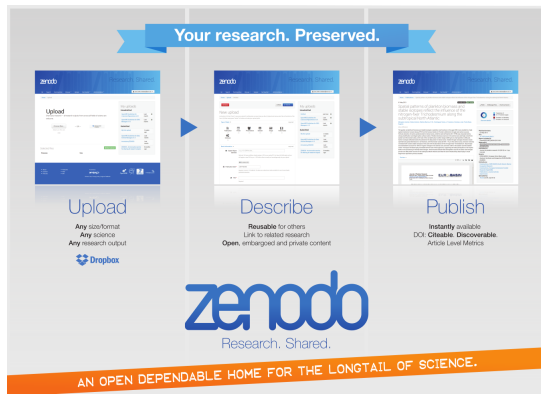

Research data life cycle according to Nielsen [4].

How do you do it?

Sharing your data and software on Zenodo in 3 steps [4]:

- 1 Upload.
- 2 Describe.
- 3 Publish.

By the way, the documents cited here, are themselves hosted at Zenodo!

Source: Poster presented in Dublin [5].

Upload

Before you upload, think about:

- Data management plan.
- File formats (open versus proprietary).
- Standards.
- Re-usability.
- Licenses.
- Privacy.

Zenodo allows:

- Any format.
- Any licence.
- Maximum of 50GB* and 100 files per dataset.
- Drag and drop upload.

Describe

Basic information:

- Community (e.g. *treeslab*).
- Authors or creators.
- Type: Dataset, image, model, poster, presentation, publication (book, chapter, conference paper or proceeding, report), software (notebook), video, audio.
- Title.
- Licenses.

Recommended information:

- Contributors.
- Keywords and subjects.
- Dates.
- Version.
- Publisher.

Other information:

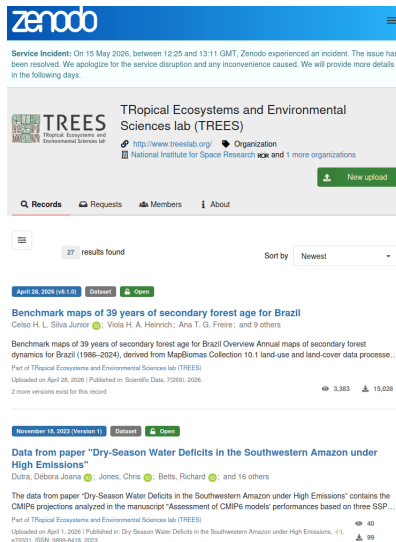

- Funding, alternate identifiers, related works, references, software, publishing information, conference, domain specific fields, visibility (public or restricted-embargo).

Publish

- Files are not editable.
- Metadata is editable.

TREESLab community at Zenodo

- You can publish any data to your Zenodo account.
- But you can also submit your data to the **TREES' community**.
- This community accepts datasets related to publications produced by the TREES lab.
- Submissions are reviewed for quality and compliance to TREES standards.

zenodo

Service Incident: On 15 May 2026, between 12:25 and 13:11 GMT, Zenodo experienced an incident. The issue has been resolved. We apologize for the service disruption and any inconvenience caused. We will provide more details in the following days.

Quero associar um dataset de uma publicação no zenodo do TREES

O ideal é enviar após a publicação, mas alguns periódicos pedem a disponibilidade do dataset durante o processo de submissão

TREES' check list for Zenodo

- You **must** have an Zenodo account associated to TREES' community to submit datasets to this community.
- Your submission would be peer reviewed by TREES' members (A + R in the [RACI matrix](#)).
- To avoid common pitfalls, we prepared a ([check list](#)).
- Read the check list before submitting your dataset to the TREES' community at Zenodo.

Common recommendations include:

- Add a README.pdf file, describing the files in your submission.
- Your submission's name **must** start with *"Data from ..."* or *"Code for ..."*.
- Include the name of financing agencies (e.g. FAPESP, CAPES, CNPq).
- Fill in ZENODO's metadata fields: description, keywords, license, link to a publication.

Questions

- *Qual o formato padrão proposto pelo Trees para o Zenodo.*
- *Uma noção básica do funcionamento da plataforma.*

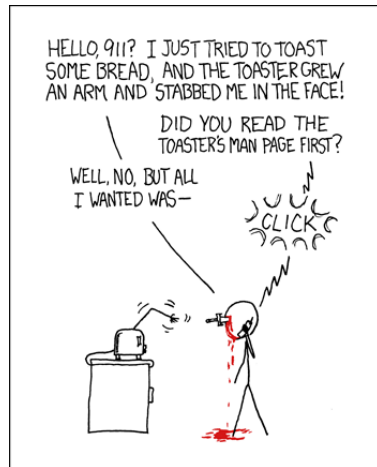

Final remarks.

Final remarks

- Please wonder if it is worth it to learn these tools, especially if you are going to be doing science **for the rest of your life**.
- Check [here](#) the *Tutorial para gerenciamento de referências bibliográficas utilizando o software Zotero* by the Ibict.
- There is a check list for submissions to TREESLab's Zenodo community (check it [here](#)).
- Also, check TREESLab' Discord chanel:
 - ▶ [ajuda-zotero](#).
 - ▶ [ajuda-zenodo](#).

RTFM

- Users don't acknowledge RTFM as their first option to solve software problems.
- This is so common, that software developers created RTFM as a gentle reminder to users of their options when dealing with software they don't know (check Wikipedia's article [about it](#)).

Source: RTFM by [xkcd](#).
